Alert me when XRP drops 10% below today's price

Show the XRP chart with RSI

DCA 10 USDT into XRP on Binance every week (paper)

Ask anything, e.g. "buy \$20 of XRP on Binance" or "show my portfolio"

KRONOS never asks for your seed or keys. Not financial advice.

Quick start

From zero to your first answer in five minutes.

- 1 **Open KRONOS** at **kronos-cube.vercel.app** on a computer or phone. On a phone you can also open it inside the Xaman, MetaMask or Phantom in-app browser.
- 2 **Sign in.** Press **Sign in** (top right on a phone, bottom of the sidebar on a computer) and pick Xaman, MetaMask, Phantom or another wallet through WalletConnect. You only sign a short text message: no transaction, no fee. No wallet yet? The Sign in screen has a **“No wallet yet? Start here”** guide with the official install links (see chapter 2).
- 3 **Follow the short tour** that appears the first time: connect your wallets, optionally link an exchange, and try your first question.
- 4 **Top up a few dollars on \$ Billing / Plan** (RLUSD or XRP with Xaman, or USDC with MetaMask on Base or Phantom on Solana). AI answers are paid from this prepaid balance: KRONOS gives no free credit, and a few dollars lasts a long time because each answer usually costs only a few cents. If you type a message before topping up, it is kept and put back in the message box after you add credit (as long as you do not reload the page).
- 5 **Ask anything**, e.g.

Show my portfolio

buy \$20 of XRP on Binance

Alert me when BTC goes above \$100000

Three rules to remember

KRONOS never holds your keys

- Nobody from KRONOS will ever ask for your seed phrase, secret numbers or private key. If you paste something that looks like one, the app blocks it.
- Nothing moves without you: every trade needs your **Confirm**, and every wallet transaction needs **your signature in your own wallet** (XRPL actions only in Xaman).
- Exchange API keys must have **withdrawals switched off**. Keys that can withdraw are refused.

Free and Pro

Features marked **PRO** belong to the KRONOS Pro plan. Pro is **COMING SOON** : until it launches, every account can use the full app at the standard price. See chapter 12.

What KRONOS is

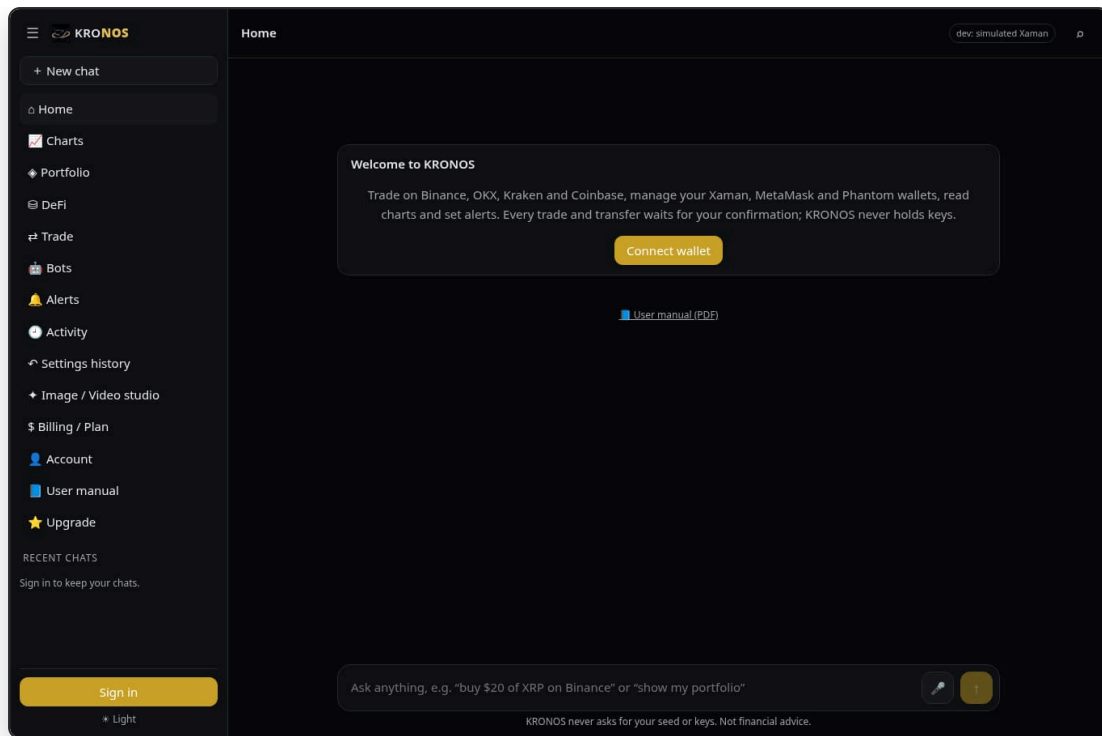

KRONOS is a chat-first crypto app. Instead of jumping between wallets, exchange apps and chart sites, you ask in plain words. Balances, order previews, quotes, charts and alerts appear in the conversation as cards you can act on.

What you can do

- **See everything in one place:** XRPL, EVM (Ethereum, Base, Arbitrum and more) and Solana wallets, Bitcoin, Tron, Sui and TON addresses, and your exchange accounts, with one net-worth number and profit and loss.
- **Trade on your exchanges** (Binance, OKX, Kraken, Coinbase) with a preview and a Confirm for every order.
- **Swap, bridge and send** from your own wallets, always signed by you.
- **Lend, borrow and earn** on Aave, Morpho, Kamino and Meteora **PRO**, with health-factor protection.
- **Compare routes** between exchanges and DEXs (**Best price**), and **rebalance** to target weights **PRO**. Describe a **multi-step plan** in one sentence and KRONOS lays out the steps for you to confirm one by one.
- **Look up any token on DexScreener:** price, volume, liquidity, pair age and risk hints, plus the most boosted and newest pairs.
- **Charts** with indicators and drawing tools, **price alerts**, and **bots** that start in paper mode.
- **Image and video studio** for generating media.

Finding your way around

The **sidebar** on the left (the ☰ button on a phone, or the tab bar at the bottom) holds: New chat, Home, Charts, Portfolio, DeFi, Trade, Bots, Alerts, DexScreener, Activity, Settings history, Image / Video studio, Billing / Plan, Account,  **User manual**, Upgrade, then your recent chats and the Sign in / account button. The ☾ **Dark / Light** switch sits at the very bottom; KRONOS remembers your choice (and follows your device setting the first time).

KRONOS signed out: the sidebar on the left, the welcome card and the message box.

KRONOS gives information and tools, not financial advice. Crypto prices are volatile; only trade what you can afford to lose.

Getting started: signing in and the tour

Press **Sign in** (or **Connect wallet** on the welcome card). Choose how to sign in:

Option	How it works
Xaman (XRPL)	Scan the QR code with Xaman on a computer, or tap the button on a phone to open Xaman directly. Approve the sign-in request.
MetaMask (EVM)	MetaMask asks you to sign a text message ("Sign-In with Ethereum"). No transaction, no gas.
Phantom (Solana)	Phantom asks you to sign a text message. No transaction, no fee.
WalletConnect	For other wallets: scan the QR code with your wallet app and approve the message.

No wallet yet? Start here

A wallet is a free app that holds your crypto and proves it is you, with no email and no password. The Sign in screen explains each option and links to the official download pages; open **"No wallet yet? Start here"** to see the steps:

- 1 Install one wallet: **Xaman** (xaman.app, for the XRP Ledger), **Phantom** (phantom.com/download, for Solana) or **MetaMask** (metamask.io/download, for Ethereum and other EVM networks). Only use these official links.
- 2 Follow the app's setup. It shows you a **secret recovery phrase**: write it on paper and keep it private. Never type it into KRONOS or give it to anyone. KRONOS never asks for it.
- 3 Come back and press that wallet's sign-in button, then approve the short text message.

One wallet = one KRONOS account

Every wallet you sign in with becomes its own KRONOS account, with its own chats, balance and settings. Use the same wallet each time you come back. To use several wallets in one account, sign in with your main one and add the others with **Account → Link wallet**. A wallet that already has its own account cannot be linked (accounts are never merged).

If a sign-in is declined or expires in Xaman, KRONOS tells you so at the top of the page and offers **Try again**; nothing happens until you approve. If you type a chat message while signed out, it is kept and sent automatically as soon as you are signed in.

Pages that need an account (Trade, Bots, Alerts, DeFi, Activity and others) show a **Sign in** button right on the page. The browser **Back** button moves between pages, and each page has its own address (for example /#trade).

On a phone

If the wallet doesn't open, open KRONOS inside your wallet's own browser (Xaman, MetaMask or Phantom all have one) and sign in from there.

Your session lasts up to 30 days on that device. To sign out, open **Account** and press **Sign out**.

The first-run tour

The first time you sign in, a short tour walks you through three steps. You can skip it at any time.

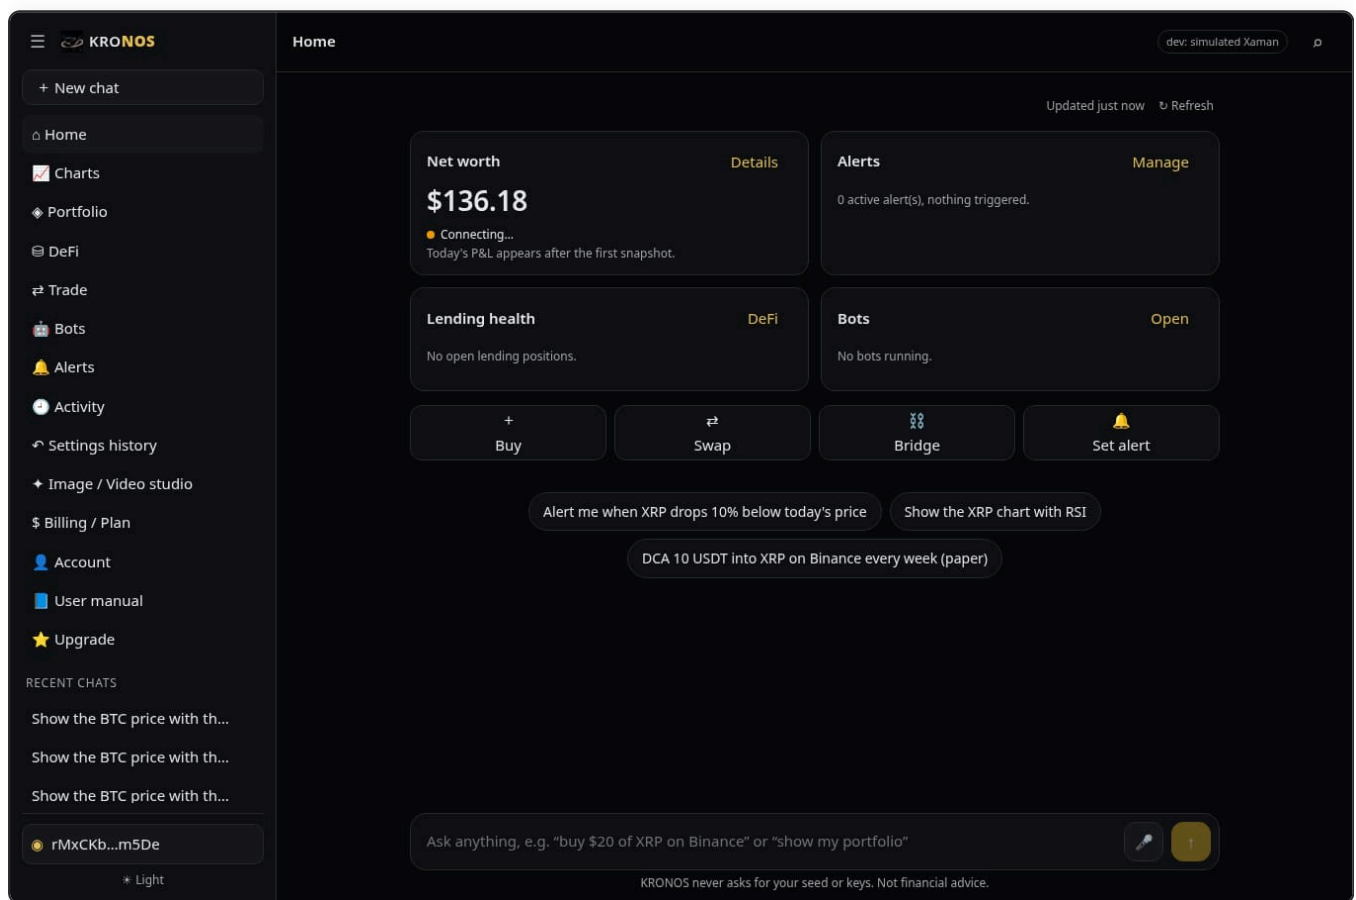

- 1 **Connect your wallets:** link MetaMask, Phantom or Xaman to see balances and DeFi positions.
- 2 **Link an exchange (optional):** add a read or trade API key for Binance, OKX, Kraken or Coinbase with withdrawals OFF.
- 3 **Ask in plain words:** try [Show my portfolio](#)

The home dashboard

After signing in, **Home** shows a summary of your accounts:

- **Net worth** across linked wallets and exchanges, with the 24-hour change.
- **Top holdings** and a small chart, with live prices.
- **Fix-it suggestions**, e.g. “link an exchange”, “top up credit” or a lending position close to its health-factor limit, each with a one-tap button.
- **Quick actions**: Buy, Swap, Bridge, Set alert and more. They open a preview in chat; nothing runs on its own.
- **Recent activity** (the full list is on the **Activity** page).

The dashboard refreshes every couple of minutes; use the refresh button for an instant update.

The signed-in home dashboard.

Linking wallets

Open **Account** and use **Link Xaman / MetaMask / Phantom** (or WalletConnect) to add more wallets to the same account. Each link asks for a signed message from that wallet, which proves it's yours. Nothing is spent.

Network	What you get
XRPL (Xaman)	XRP and spendable balance, trustline tokens, AMM pool positions, NFTs, history. All XRPL actions are approved in Xaman only.
EVM (MetaMask, WalletConnect)	Token balances across Ethereum, Base, Arbitrum, Optimism, Polygon and other supported chains, plus DeFi positions.
Solana (Phantom)	SOL and token balances, DeFi positions (Kamino, Meteora and others).
Bitcoin, Tron, Sui, TON	Add an address as watch-only under Other networks: balances and explorer links, no signing.

Other networks: Bitcoin · Tron · Sui · TON
read-only

Bitcoin bc1qxy2k_hx0w1h cold watch-only	0.1205 BTC \$9,640	\$9,640 ×
Tron T0rY8try_yn45Tm TronLink from wallet	1,220 TRX \$403 803.2 USDT \$803	\$1,206 ×
Sui 0x000000...000005 Slush from wallet	309.5 SUI \$313	\$313 ×
TON UQCxE6mU...Id_p0p Tonkeeper from wallet	210 TON \$441 199.25 USDT \$199	\$640 ×

Watch-only addresses are only read (mempool.space, TronGrid, Sui GraphQL, toncenter) and count toward your net worth. Ownership is not verified for typed addresses. Sends need the wallet that controls the address: Unisat / Xverse / Leather (BTC), TronLink (Tron), Slush or another Sui Wallet Standard wallet, Tonkeeper / MyTonWallet (TON).

Adding Bitcoin, Tron, Sui or TON addresses as watch-only.

Wallet limits

Free accounts can link up to 3 wallets; Pro is unlimited **PRO**. These limits only apply once Pro launches.

Connecting exchanges

KRONOS connects to **Binance, OKX, Kraken and Coinbase** with an API key that you create on the exchange. Go to **Account → Exchanges**, accept the risk notice once, pick the exchange and follow the steps shown there. The app shows the exact **IP address** to allowlist.

Always: withdrawals OFF, IP allowlist ON

KRONOS checks the key's permissions before saving it and again on every use. A key that can withdraw or transfer is refused, or switched off if the permission appears later. Kraken and Coinbase don't report IP allowlists, so please don't skip that step there.

Binance

- 1 Binance → **API Management → Create API** (system-generated).
- 2 Enable **Reading**, and **Spot & Margin Trading** only if you want to trade (KRONOS places spot orders only). Leave **Withdrawals OFF**.
- 3 Choose "Restrict access to trusted IPs only" and add the IP shown in KRONOS.
- 4 Paste the API key and secret into KRONOS.

OKX

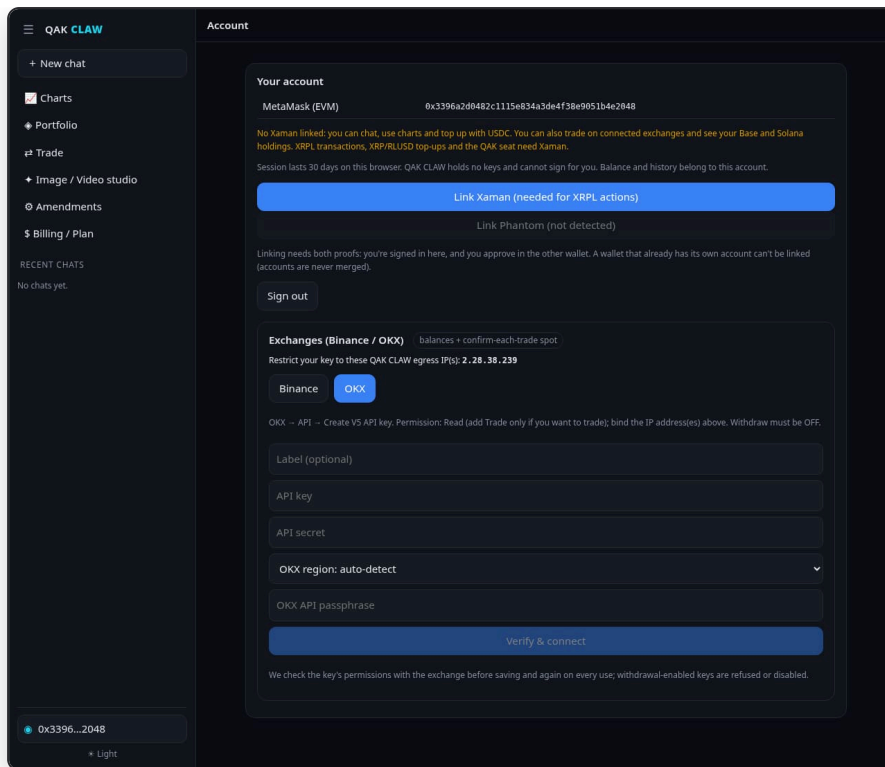

- 1 OKX → **API → Create V5 API key**.
- 2 Permission: **Read** (add **Trade** only to trade). **Withdraw must be OFF**.
- 3 Bind the IP address shown in KRONOS, and note the passphrase you set.
- 4 Paste the key, secret and passphrase. Pick your OKX region if "auto" doesn't work.

Kraken

- 1 Kraken (or Kraken Pro) → profile icon → **Settings → Connections & API → Create API key**.
- 2 Funds: tick **Query Funds** only. Leave Withdraw, Deposit and Earn **unticked**.
- 3 To trade, also tick: Query open orders & trades, Query closed orders & trades, Create & modify orders, Cancel & close orders.
- 4 Advanced settings → **IP allowlist**: add the IP shown in KRONOS.
- 5 Copy the **API key** and **Private key** (shown once) into KRONOS. If you later see "Invalid nonce", raise the key's Nonce Window.

Coinbase

- 1 Go to **portal.cdp.coinbase.com → API Keys → Secret API Keys → Create API key**.
- 2 Pick the portfolio (Default). Permissions: **View** (add **Trade** only to trade). **Transfer must be OFF**.
- 3 Advanced settings → **IP allowlist**: add the IP shown in KRONOS. Ed25519 or ECDSA both work.
- 4 Paste the **API key name** and the **private key** exactly as shown (multi-line is fine, or paste the whole downloaded JSON file).

Account → Exchanges, with the steps and the IP address to allowlist.

Free accounts can connect 1 exchange; Pro is unlimited **PRO** (once Pro launches). You can remove a key at any time from the same panel; also delete it on the exchange.

Net worth and P&L

Open **Portfolio**, or ask [What's my net worth?](#) [Show my P&L](#) . The net-worth card adds up every linked wallet and exchange and shows:

- Total value in USD and the change over 24 hours, 7 days and 30 days.
- A breakdown by wallet, exchange, chain and asset.
- DeFi positions (supplied, borrowed, staked, liquidity) with health factors. Use the **DeFi** page or [Scan my DeFi positions](#) .

Net worth with P&L and the asset list.

Prices and dust

Tokens without a reliable price, and tiny “dust” balances, are listed separately and not added to the total. A fresh DeFi scan can cost a small amount of credit; repeat scans within a minute are free.

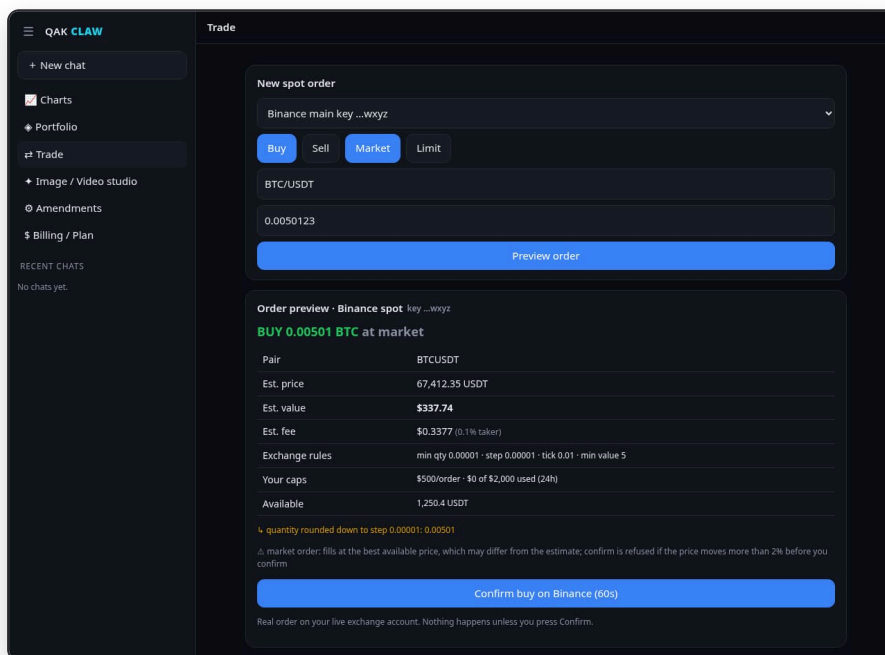

Tax export as CSV is available on Pro **PRO**.

Chat and AI tools

Type in the message box at the bottom. KRONOS understands English and Greek. The assistant answers, and for anything that moves money it shows a **card** with the details and a button. **Nothing runs until you press the button and, for wallets, sign in your wallet.**

Exchange trades

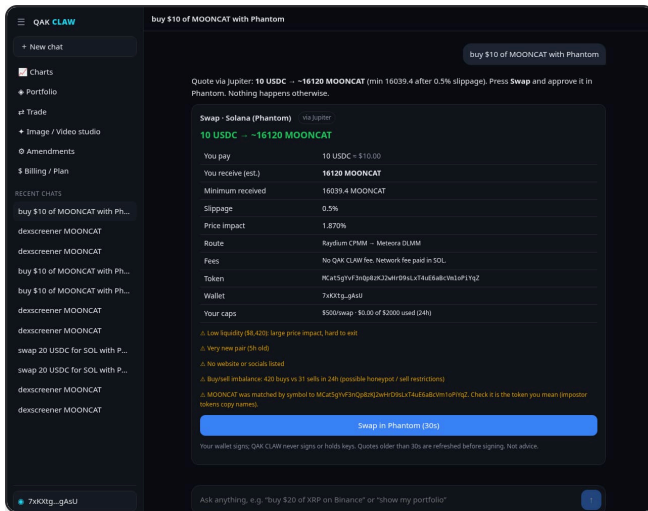

buy \$20 of XRP on Binance **sell 0.01 BTC on OKX** show a **trade preview** with price, size, fees and your limits. Press **Confirm** to place the spot order. Your per-order and daily caps are set on the **Trade** page; open orders can be cancelled there.

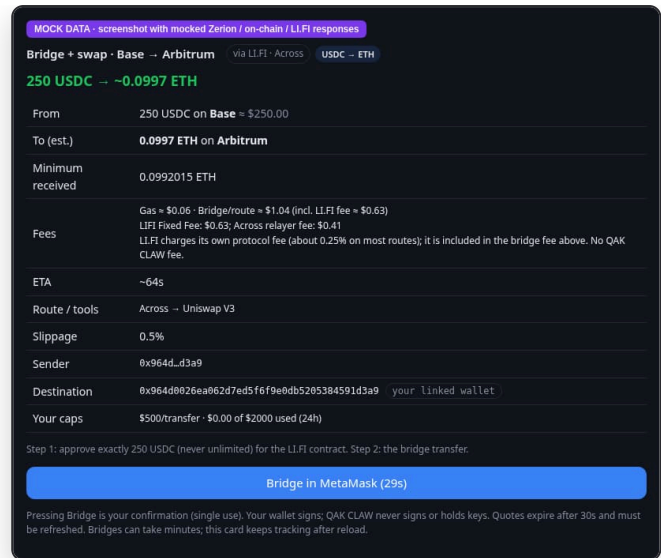

A trade preview waits for Confirm.

Swaps and bridges

swap 50 USDC to ETH on Base **Bridge 20 USDC from Base to Arbitrum** return a quote card with route, fees, time and minimum received. Each card also says in plain words what you give and the least you will get (the “minimum received”). Quotes last **60 seconds**; a countdown shows the time left and you get a new quote if it expires. Press **Swap** or **Bridge** and sign in your wallet, or press **Cancel** to drop the quote: nothing is sent, signed or charged. The same Cancel button is on trade, DeFi, Ride and XRPL bridge confirmation cards. Before a swap or bridge is submitted, KRONOS also checks that the transaction your wallet produced is the one you were quoted (right wallet, tokens and amount) and refuses it otherwise.

Swap quote.

Bridge quote.

Smart routing **PRO**

compare routes to buy \$50 of SOL compares your exchanges and DEXs on price, fees and gas, and suggests the cheapest. You still confirm the chosen route.

Best price **PRO**

best price for 100 USDC to SOL compares every venue you can use (your linked exchanges, Jupiter and 0x swaps, LI.FI bridge routes and, for XRP and RLUSD, the XRPL order book and AMM) and ranks them by the **amount you actually receive** after fees, network costs and price movement. It is read-only: picking a route opens that venue's normal preview card, and nothing is placed or signed until you confirm there.

Multi-step plans

Describe a job in one sentence, e.g. sell half my XRP, move it to Solana and buy SOL. KRONOS shows a **plan card** with up to six ordered steps, each with its venue, expected amounts, fees and a safety check. Nothing runs by itself: press **Start**, and each step opens its normal preview card only after the previous step is confirmed done. Right before a step is signed it is re-quoted; if the price is more than 2% worse than the plan, or a safety check fails, the plan **pauses** and asks you. You can **Cancel** a plan at any time; a cancelled plan stays cancelled. Active plans appear on the Portfolio page.

DexScreener

Open  **DexScreener** in the sidebar (when it is switched on for your KRONOS) or ask

look up BONK on DexScreener, trending tokens on Solana, new pairs on Base. You see price, 24h change, volume, liquidity, pair age, risk hints and a scam-list check. “Boosted” means someone paid for promotion; it is not a quality signal. The data is for information only.

Automation rules (admin preview)

Take-profit, stop-loss and DCA **rules**, with signed spending limits called **Permissions**, are in a limited preview: the  **Permissions** and  **Rules** pages only appear for accounts where it has been switched on. Even then, KRONOS holds no keys and signs nothing for you: when a rule triggers it checks your permission

limits and the best price, then **notifies you** with a button that opens the normal preview for you to confirm. Nothing executes automatically.

Rebalancing **PRO**

rebalance my portfolio builds a plan (a dry run) to move toward your target weights. Each step is a separate preview you confirm or sign.

Lending, borrowing and liquidity **PRO**

Supply, borrow, repay and withdraw on **Aave** and **Morpho** (EVM) and **Kamino** (Solana), and add or remove liquidity on **Meteora** (Solana). Ask e.g. **supply 100 USDC on Aave on Base** or **health factor**.

Health-factor floor: 1.5

KRONOS refuses any borrow or withdrawal that would leave your health factor below **1.5**. Positions below 1.5 are flagged amber (“at risk”); below 1.1 red (“close to liquidation: repay or add collateral now”).

Ride Markets: Up and Down rides

Ride Markets (ride.markets) lets you post a small **USDC bond** on a call such as “SOL goes Up in the next hour”. A fund on Solana then trades a much bigger position for you. If you win, you get your bond back plus the fund’s **profit share** of the trade (minus Ride’s 10% performance fee on that share). If you lose, the bond goes to the fund. Open  **Ride** in the sidebar, or ask in chat: **ride funds**

ride SOL up for 1h with \$10

ride JUP up for 4h

ride BONK up for 1d with \$20

ride JUP up for 1h with \$10

ride SOL down for 4h

ride BTC down for 1h with \$10

ride TSLA down for 4h

my rides

ride leaderboard

- **Funds.** The Ride page lists the funds from Ride’s public list with their profit share, the trade size at the minimum bond, whether they take Down rides, and how much room your wallet has left. Funds marked **USDC bond** can be ridden inside KRONOS. Funds that bond in their own coin or use a fixed bond show **Open in Ride**.
- **Any token.** Rides are not just SOL. On the Ride page, the **Token** picker lists popular coins (SOL, JUP, BONK, WIF, JTO, PYTH, RAY, TRUMP, POPCAT, RENDER, W and ORCA) with logos and live prices, and you can search any Jupiter-verified Solana token by symbol, name or mint address. Press **Ride** next to a fund and the composer opens with that fund selected and the picker ready; if the fund only takes a list of tokens, the picker shows only those. Tokens Ride Markets blocks are never offered. For **Down** rides the picker shows the fund’s perp markets.
- **Best fund.** Ride has no cross-fund routing, so KRONOS compares the eligible funds itself (highest profit share first, then the bigger trade) and tells you why it picked one. You can switch to another fund on the card.
- **Preview card.** Shows the coin, Up or Down, period, fund, bond, trade size and profit share. Chat can only *fill in* the card; you change the bond or period on the card and press **Confirm** within 60 seconds.
- **Signing.** The first ride of the day asks you to sign Ride’s once-a-day session message (no funds move). Ride then builds the transactions, and KRONOS shows a **final check** with the exact USDC bond. Press **Sign in Phantom** (or your WalletConnect Solana wallet) and approve each transaction in order; KRONOS waits for each one to confirm. Keep about **0.03 SOL** for network costs.

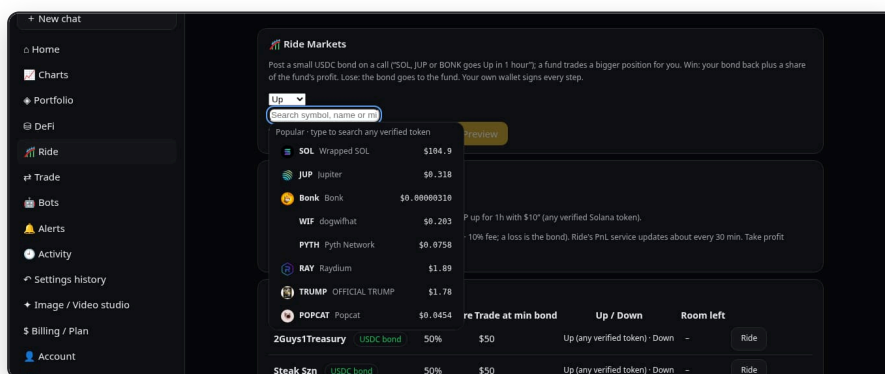

- **My rides.** Open and settled rides, bond and trade size, live P&L, outcome and estimated payout. They also appear on the Portfolio page, in P&L, in Activity, and you get an alert when a ride settles or Take profit unlocks.
- **Take profit.** On Up rides, a **Take profit** button appears at **+5%** or more. You sign a short message; Ride's resolver sells when the fund's floor is met. Down rides run to the end.
- **Leaderboard.** Top riders and biggest rides by week, month or all time, from Ride's PnL service (updated about every 30 minutes).

Checks before your wallet signs

Before each transaction reaches your wallet, KRONOS checks that **you** are the fee payer, that only Ride's programs are called, and simulates it: the USDC leaving your wallet may never be more than the bond you confirmed. Tokens Ride blocks are refused. If anything doesn't match, nothing is signed. KRONOS never holds your keys or signs for you. If the transactions get older than about a minute, KRONOS fetches fresh ones for the same ride, so nothing is charged twice. Rides are available on Free and Pro.

Down rides step by step (including BTC, TSLA and other non-Solana markets)

1. Link your Solana wallet and open  Ride.
2. Set the direction to **Down**. Only funds that take Down rides stay selectable.
3. Pick a fund (for example Solarians Vault) or press **Ride** next to it.
4. Open the **Token** picker: it now lists that fund's perp markets, which can include assets that are not Solana tokens, such as **BTC**, **TSLA** or **NVDA**.
5. Choose the market, bond and period, then press **Preview**. The card shows the bond, trade size, profit share and fees.
6. Press **Confirm** and approve each transaction in your wallet. Down rides run to the end of their period (no Take profit).

The token picker: popular coins with logos and prices, plus search by symbol, name or mint.

Ask **send 10 XRP to r... tag 123**. KRONOS checks the address and amount and shows a review card; you sign in Xaman. Risky XRPL actions that could hand over control of your account are refused.

Charts, the Cmd-K palette and voice input

Charts

Open  **Charts** for full candle charts with timeframes, indicators (moving averages, RSI, MACD and more), drawing tools (trend lines, horizontal lines, Fibonacci) and calendar layers. In chat, ask

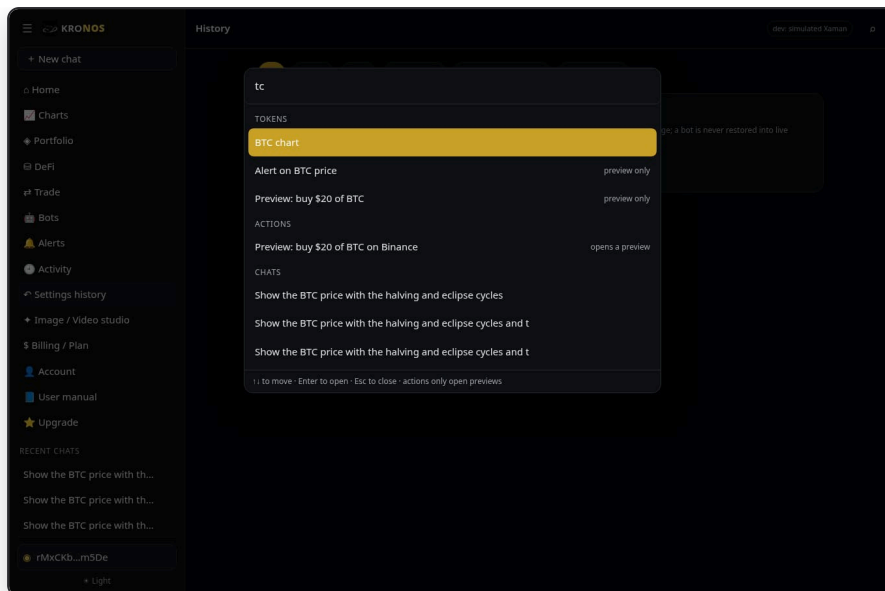

Show the BTC price with a chart to get a chart card.

Charts with indicators.

Cmd-K palette

Press **Cmd-K** (Mac) or **Ctrl-K** (Windows), or the  button at the top right. Search pages, tokens, wallets, chats and actions. Use **↑ ↓** and **Enter**. Actions only open previews; nothing runs from the palette. Type “manual” to download this guide.

The Cmd-K palette.

Voice input

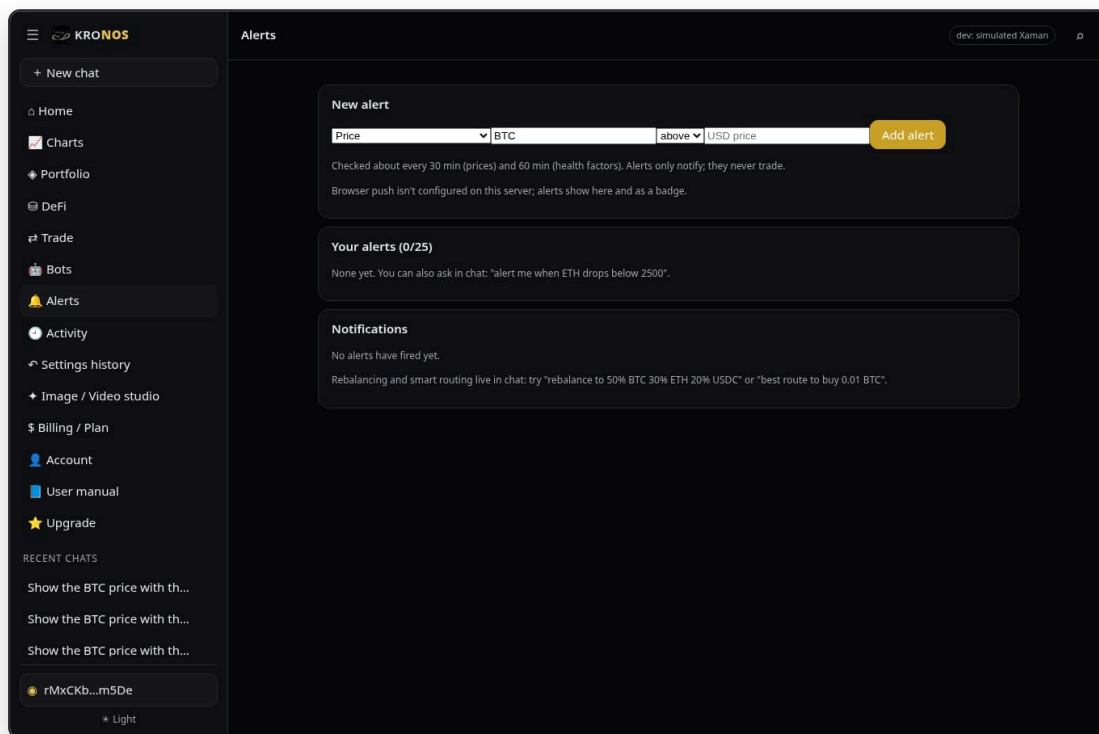

Tap the  button in the message box and speak. Your words fill the message box; check them and press send. Allow microphone access when your browser asks.

Alerts

Ask **Alert me when BTC goes above \$100000** or open  **Alerts**. A preview card shows the alert; press to save it. When it triggers you get a message in KRONOS and, if you allow it, a notification.

- **Price alerts:** above or below a price. Free: up to 3.
- **Unlimited alerts, health-factor (liquidation) alerts and token-unlock alerts** **PRO**.

Pause, edit or delete alerts on the Alerts page. Changes can be undone from **Settings history**.

The Alerts page.

Bots

Ask e.g. **DCA \$10 of BTC every day on Binance** or open  **Bots**. Strategies: DCA, grid and simple rules.

- 1 **Paper first.** Every bot starts in **paper mode**: live prices, simulated fills, no real orders.
- 2 **Live needs your confirm.** Switching a bot to live needs an explicit confirm for that bot, which states its limits. It needs a trade-enabled exchange key with withdrawals off.
- 3 **Caps.** Each bot has a per-order cap, a daily cap and a maximum daily loss. Your global trading caps also apply.
- 4 **Kill switch.** Say **stop all bots** or use the switch on the Bots page to pause every bot at once.

Free accounts get 1 paper bot. **Live bots** and **several bots at once** are Pro **PRO**.

Bots can lose money

Test in paper mode first and keep caps small. A bot is never restored into live mode by undo.

Safety

How your funds stay yours

- **No custody, no keys.** KRONOS never holds your funds, never stores private keys or seeds, and never signs for you.
- **Every action needs you.** Exchange orders need your **Confirm**; wallet transactions need your **signature** in your own wallet; XRPL actions are approved only in **Xaman**.
- **Exchange keys** are stored encrypted, must have withdrawals off and should be IP-allowlisted. Caps and a kill switch limit trading.
- **When in doubt, KRONOS stops.** If a check can't be completed, the action is refused rather than guessed.

Tips

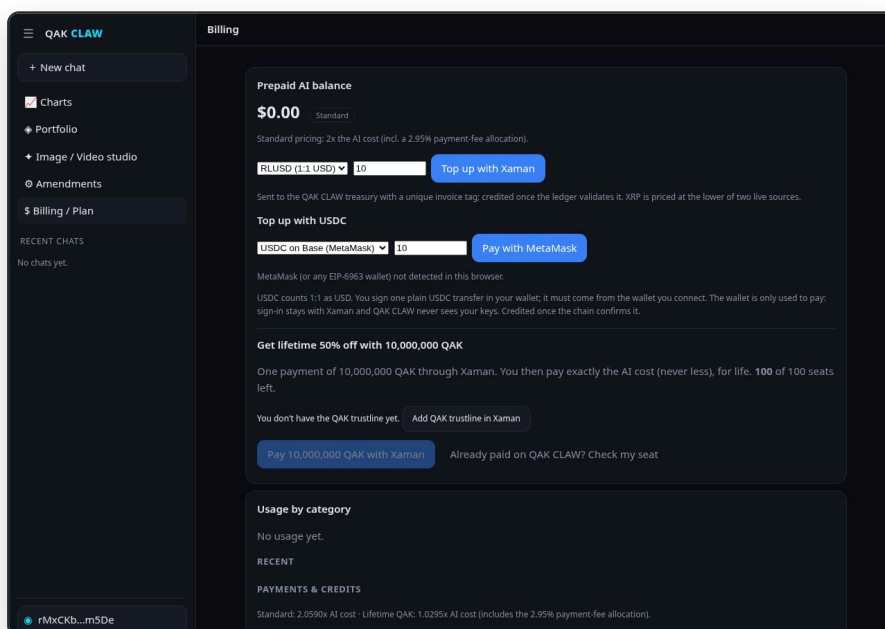

- Read every card and every wallet prompt before you sign: amount, address, network.
- Bookmark the real address **kronos-cube.vercel.app**. Ignore messages asking you to “verify” your wallet elsewhere.
- Remove exchange keys you no longer use, both in KRONOS and on the exchange.

Credits and pricing: Free vs Pro

Prepaid credits

AI answers, media and some data scans are paid from a **prepaid balance**. Top up on **\$ Billing / Plan: RLUSD or XRP** with Xaman, or **USDC** with MetaMask (Base) or Phantom (Solana). You see the cost of what you use. On the Free plan each answer costs **twice** what the AI provider charges KRONOS (that is the “2x”); Pro pays the provider price with no markup (1x). A short answer usually costs only a few cents, and while an answer is being written KRONOS sets aside a small amount and then charges only what was really used. There is no free credit and no subscription. If your balance is too low the chat explains it, tells you how much is needed, and keeps your message so you can send it after topping up.

Refunds (Terms, section 6): payments on a blockchain are final and credits are non-refundable once used. Unused credit is not refunded automatically when an account is deleted or closed. A refund request must be made in writing to **sportscoutube@gmail.com** within 14 days of the top-up; refunds are at our sole discretion, subject to applicable law.

Topping up with USDC.

KRONOS Pro COMING SOON

Pro is a **one-time, lifetime unlock for \$99**, paid in the **KRONOS token** at that day's price. The quote holds for 15 minutes and you sign the payment in your own Solana wallet. Until Pro launches, the Upgrade page shows “Coming soon” and every account keeps full access at the standard price. Right after the token launches it may show “Pro opens when KRONOS liquidity is reached” until the market is deep enough for a fair price.

If you close the page after signing, KRONOS keeps checking your payment and the Upgrade page picks it up when you come back. A payment of the quoted amount inside the 15 minutes counts even if the price moves later. If you pay twice (for example from two tabs), the second payment is added to your account as prepaid credit; it is not refunded automatically. A payment sent after the quote expired is not applied and is recorded; you can ask for a refund in writing to **sportscoutube@gmail.com** within 14 days (at our discretion, Terms section 6).

Feature	Free	Pro (lifetime)
Wallets / exchanges	3 wallets, 1 exchange	Unlimited
AI chat	Pay as you go from prepaid credits (a daily message cap only starts once Pro launches)	No daily cap beyond fair use
Prices, charts, Cmd-K, swaps, bridges	Yes	Yes
Bots	1 paper bot	Live bots, several at once
Alerts	3 price alerts	Unlimited + liquidation and unlock alerts
Smart routing, rebalancing	No	Yes
Aave / Morpho / Kamino / Meteora	No	Yes
Tax CSV export	No	Yes
Credit pricing	2×	1×

[Back to the app](#)

KRONOS Pro

One payment, lifetime access. \$99, paid in KRONOS at that day's market price. You sign the transfer in your own wallet. KRONOS never holds your keys.

Feature	Free	Pro (lifetime)
Portfolio, net worth & P&L across chains	Up to 3 wallets, 1 exchange	Unlimited wallets & exchanges
AI chat	20 messages a day	Unlimited (fair use)
Live prices, charts in chat, Cmd-K	✓	✓
Trading bots	1 paper bot	Live bots, several at once

Tax export (CSV)	—	✓

Unlock Pro for \$99

Coming soon: Pro unlocks open when the KRONOS token launches. Until then every account keeps its current access.

KRONOS is a utility token used to unlock app features. Buying it is not an investment and comes with no promise of profit, returns or revenue share. Token prices are volatile. See [TOKEN.md](#)

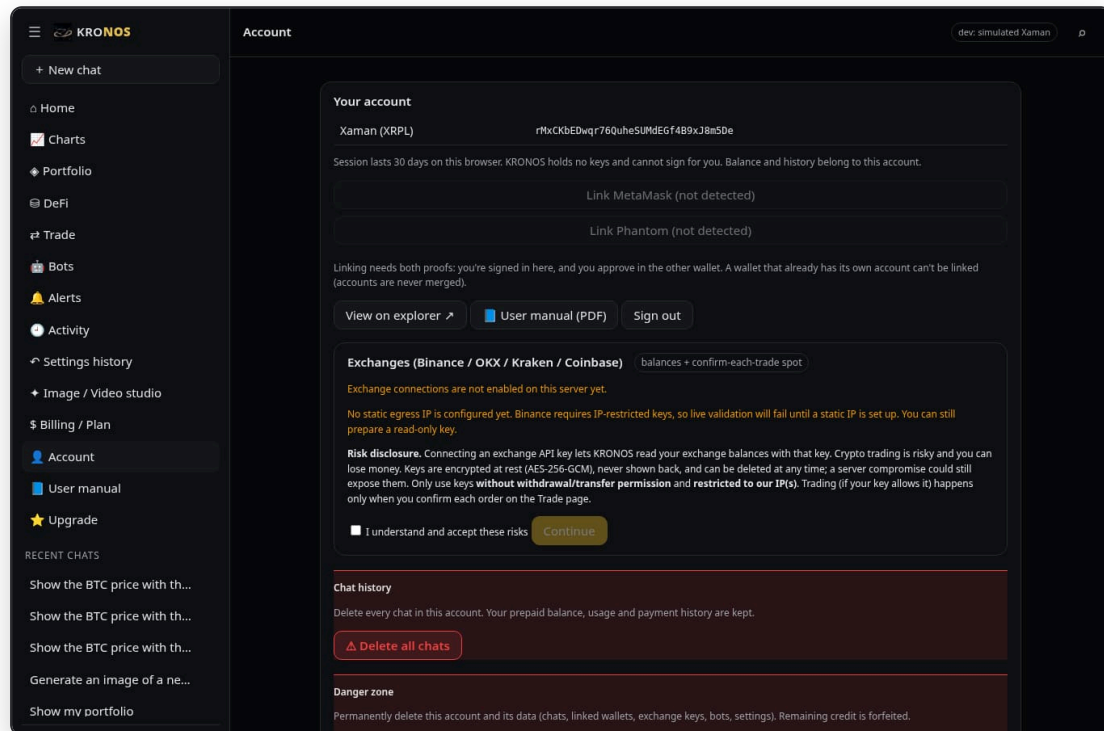

The Upgrade page.

The KRONOS token is a utility token used to pay for Pro. It is not an investment and carries no promise of profit or returns.

Account, settings history and deleting data

Account page

Click  **Account** to see your signed-in wallets, link more wallets, manage exchange keys, download this manual and **Sign out**.

The Account page.

Terms, Privacy and Risk pages

The links **Terms**, **Privacy** and **Risk** are at the bottom of the sidebar and on the sign-in screen, and open plain-language pages that say how KRONOS works: non-custodial, you sign everything, no keys or seed phrases, what data is kept, and the risks of crypto. They follow your Light or Dark theme. They are run by Kronos Inc.; contact sportscoutube@gmail.com. A short notice says they have not yet been reviewed by a lawyer. They are not legal advice.

Settings history and undo

Changes to alerts, bots, rebalance targets and trading limits are saved as versions. After a change, an **Undo** button appears; the  **Settings history** page lists older versions you can restore. The **Activity** page lists your trades, transfers and other events.

Deleting chats

Hover a chat in the sidebar (or long-press on a phone) and press the bin icon. To delete every chat, use **Delete all chats** on the Account page.

Deleting your account

- 1 Account → **Delete account**.

- 2 Type **DELETE** and sign the confirmation message with your wallet.
- 3 Your chats, keys, alerts, bots and links are removed and every session is signed out. A minimal anonymous payment record is kept for accounting.

This can't be undone

Any unused prepaid credit is lost.

Installing KRONOS on your phone

KRONOS works as an installable app, with its own icon and a tab bar at the bottom.

iPhone (Safari)

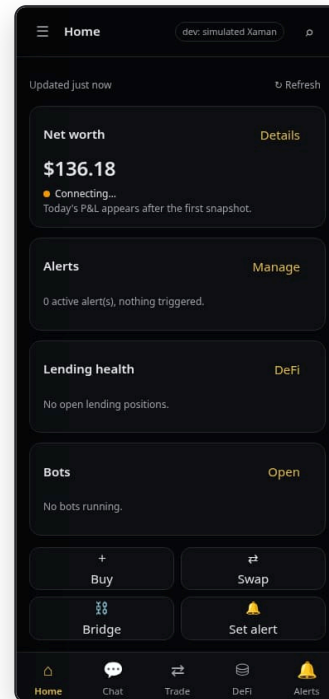

- 1 Open kronos-cube.vercel.app in Safari.
- 2 Tap **Share** → **Add to Home Screen**.
- 3 Open KRONOS from the new icon.

Android (Chrome)

- 1 Open the site in Chrome.
- 2 Tap **⋮** → **Install app** (or Add to Home screen).

Computer

In Chrome or Edge, use the install icon in the address bar.

KRONOS on a phone.

To sign transactions on a phone, KRONOS opens your wallet app (Xaman, MetaMask, Phantom) and returns when you approve.

Troubleshooting and FAQ

Problem	What to do
The wallet doesn't open when I sign in	Open KRONOS in your wallet's in-app browser, or use the QR code from a computer.
"Insufficient credit"	Top up on Billing / Plan.
Exchange key refused	Withdrawals or transfers are enabled, or the IP allowlist is wrong. Create a new key following chapter 5.
Kraken "Invalid nonce"	Raise the key's Nonce Window on Kraken.
Quote expired	Quotes last 60 seconds. Ask again for a fresh one, or press Cancel to drop it.
"Can't reach KRONOS" instead of Sign in	It is a connection problem, not a sign-out. KRONOS retries by itself; press Retry in the sidebar once your connection is back.
"You need a little credit to chat"	Top up on Billing / Plan (about \$5 is plenty). Your message is put back in the message box afterwards.
An answer stopped half-way	It is marked as interrupted and only the part that was written is charged. Ask again to continue.
I signed in with a different wallet and my chats are gone	Each wallet is its own account. Sign in with the original wallet, and link extra wallets from Account.
Borrow refused	It would push your health factor below 1.5. Borrow less or add collateral.
A token shows no value	It has no reliable price yet; it's listed but not counted.
Bot won't go live	Connect a trade-enabled key (withdrawals off), check your caps, and make sure the kill switch is off.
Voice input does nothing	Allow the microphone in your browser settings.
Pages look stale	Pull to refresh or press the refresh button on Home.

FAQ

Can KRONOS move my money without me? No. Every order needs your Confirm and every wallet transaction your signature.

Do you see my seed phrase or keys? Never your wallet keys or seed phrase: don't type them anywhere in KRONOS. If you connect an exchange, KRONOS stores that exchange's API key (trade-only, no withdrawals) encrypted. Someone who got that key could place trades on your account (not withdraw), so give it the smallest limits and an IP allowlist, and remove it when you stop using KRONOS.

How does KRONOS earn money? Only from AI/usage credits (2× the provider cost on the Free plan) and Pro. It adds no fee on swaps, bridges or Ride.

Can I use it in Greek? Yes. Μπορείτε να γράφετε στα ελληνικά.

Is there a community? Yes: the KRONOS Telegram group t.me/KRONOSCUBE. Its bot, [@KRONOSCUBEBOT](https://t.me/KRONOSCUBEBOT), welcomes new members, removes scams and spam, answers app questions from this manual (including Ride and the token picker) and runs X raids. Admins never DM you first and never ask for keys or seed phrases.

When does Pro launch? The Upgrade page will switch from “Coming soon” when the KRONOS token is live. Until then, everyone has full access at standard pricing.

Is the KRONOS token an investment? No. It's used to pay for Pro; there's no promise of profit.

How do I get this manual again?  User manual in the sidebar, on the Account page, in Cmd-K, or at the bottom of the signed-out home page.

Disclaimer: KRONOS is a tool, not a financial adviser. Crypto assets are volatile and you can lose money. You are responsible for every action you confirm or sign.
